The pellet mill is designed to process a powdery product into pellets through the combined action of heat, moisture, and compression.

Features
- Driven by belt
- Single or dual transmission
- Robust and reliable
- High capacities
- Very good value for money
- Low maintenance costs
- Options flexibility
Pellet mill LYDERIC
Options and safety devices

Options
• Product chute with by-pass flap
• Dual transmission (DT)
• Special unclogging ring on hollow shaft
• Flap box under outlet

Safety devices
• Micro contacts on doors
• Shearing pin
• Static magnet
• Belt slipping control on transmission belts
• Clogging detection

Regulation
STOLZ offers a system guaranteeing automation, supervision, and control of the pelleting lines components. That system is provided with the following capabilities:
• Formula control,
• Load and temperature monitoring,
• Self-adapting variations intensity,
• Additives injection control,
• Dies control,
• Accessibles parameters with password,
• Loading shapes and regulation can be linked to formulas.
• Remote maintenance
